

How to Debug using Jboss

Setup the Debug Configuration

1. Create a copy of JBoss/bin/run.bat
2. Rename it, eg run_debug.bat
3. Edit this line and remove the "rem" word

```
rem set JAVA_OPTS=-Xdebug ...
```

4. Save and exit

Run Debug Configuration

1. Run the run_debug.bat file to start JBoss
Note: JBoss will wait for debugger to connect
2. Within LJ IDE, set a breakpoint
3. From top menu, click Run > Debug...
4. Select "Remote Cobol Application"
5. Click "New"
6. Click "Browse" to select project
7. Click "Debug"
JBoss will continue to run
8. To stop debug, click "Resume" or "Terminate"
Note: To debug in Java mode, select "Remote Java Application"
